HIGH · RESOLUTION

AVT Airborne Sensing GmbH

Environmental Policy

UNI EN ISO 14001

The aim of AVT Airborne Sensing GmbH is to provide its customers with the products and services, in particular in the areas of photogrammetry, remote sensing, laser scanning and geoinformation, in the agreed scope of services, in the agreed quality and at an economical price.

The resulting expectations and requirements, as well as other technical, economic and scheduling agreements from the order, are fulfilled and are intended to ensure the complete satisfaction of the customers.

The management of AVT Airborne Sensing GmbH, decided to commit themselves to respecting the environment and to the company's continuous improvement by implementing and enforcing the Environmental Management System (EMS).

In a statement of principles, the management has defined its environmental policy as follows:

- The management sees it as an essential task to promote the sense of responsibility and respect of the environment by the employees, as well as to regulate the responsibilities and processes for all working processes and factors in principle.
- The management defines environmental objectives and evaluates them on an ongoing basis in terms of their adequacy. It regularly informs itself about the achievement of the environmental objectives, evaluates the EM system and examines the implementation and effectiveness of adopted measures for improvement. All employees have access to the EMS and other documents available on the AVT intranet.
- The management undertakes to apply the EMS described in this Policy and to continuously improve its effectiveness in the following scope:

PHOTOGRAMMETRY AND REMOTE SENSING

To achieve this, AVT Airborne Sensing GmbH is committed to:

a) Develop and maintain its Environmental Management System consistent with the UNI EN ISO 14001 standard.
b) Maintain and improve the relationship of collaboration and mutual exchange of information with the workers.
c) Eliminate environmental risks with the knowledge acquired on the basis of technical progress and, where this is not possible, reduce them to a minimum by acting on the possible causes that generated them.
d) Adopt, where possible, technologies with little impact on the environment.
e) Ensure the continuous adaptation of the EMS and interventions in the field of environment management to the needs of its workers and, in a balanced way, to the needs and expectations of all the other interested parties.
f) Disseminate the contents, strategies and objectives of the EMS to all stakeholders.
g) Promote training, awareness and information activities relating to environment.
g) Make the documentation relating to the development and maintenance of the EMS accessible to all interested parties.
h) Ensure open collaboration with suppliers, entities and administrations, control authorities and social forces for the management of issues related to the environment of all interested parties.
i) Involve suppliers in the management of risks to the environment in reference to the management of interference with the work activities of the service and emergencies (fire, spills of hazardous substances and other types of emergencies).
j) Subject the Policy and the entire integrated management system to periodic review to evaluate their correctness and effectiveness with a view to continuous improvement.
k) Ensure continuous monitoring of non-conformity management (detection, analysis, closure and verification).
l) Promote improvement actions to reduce the probability of accidents, injuries, near misses and occupational diseases and reduce their environmental impact.
m) Minimize the frequency and severity rates of injuries by tending to zero.

The management assumes overall responsibility for the EMS. For day-to-day operations in connection with the EMS Manager, the management appoints one EMS representative per department or branch. These persons come from the area of management or are suitably experienced employees and together form the 'executive team' for the implementation of the EMS. The coordination of this body is carried out by the highest EM officer (EMS manager).

Publication of the environmental policy

The management ensures that the environmental policy is conveyed, understood and respected at all levels of the company through exemplary actions, regular employee interviews and group meetings, as well as other appropriate measures, such as training courses, newsletters, posts on the website and notices.

All employees have access to the EMS and other documents available on the AVT intranet.
